Paris Agreement: *balance* between *anthropogenic* GHG emissions and CO₂ removals

Forests are the most important CO₂ sink that humans can manage

The context - EU

2022-2023 years of changes:

- KP ends
- new LULUCF legislation

LULUCF fluxes fully included in EU climate targets:

LULUCF proposal: stop & reverse the current decline of the sink (but look also beyond the sink and beyond forests)

What you don't measure, you don't manage
