

Implemented and planned improvements in the Swedish LULUCF-reporting

Mattias Lundblad, Erik Karlton, Hans Petersson, SLU

Submission 2011

- Recalculations due to new sample from the NFI (Living biomass, SOC).
- New method for interpolation and extrapolation of SOC data.
- Updated assesment of the area of organic soils under cropland.

Planned improvements

- New method to report stump systems based on recently published research. May be implemented in Submission 2011.
- Improved estimation of small trees (<10 cm diam.). Based on regression for sets of 9 years of the measured total carbon pool in this fraction.
- Improved estimation of dead wood to make the numbers more representative to each reporting year.
